

FATS, OILS, AND GREASE

Fats, Oils, and Grease build-up within the sewer system creates sewer backups, overflows, and pipe corrosion at your expense. Help keep your environment clean and avoid unnecessary maintenance costs by **keeping fats, oils, and grease out of our sewers system.**

Sources of Fats, Oils, Grease

Fat, oil, and grease are by-products of cooking found in:

- Food Scraps
- Butter, Margarine, or Shortening
- Meat Fats
- Lard
- Cooking Oils
- Mayonnaise and Salad Dressings

SOLUTIONS AND PROBLEMS

Follow These Tips:

Share these tips with your family, friends, and neighbors.

1. **Pour or scrape** greasy or oily food waste into a container or jar.
2. **Allow grease to cool or freeze** in the container before throwing it into the garbage.
3. **Use a dry wipe** to absorb any excess grease or oil still in the cookware and discard wipe into garbage.

DO NOT:

- **DO NOT** pour fats, oils, or greases down drains, garbage disposals, or toilets.
- **DO NOT** use hot water to rinse grease off cookware, utensils, dishes, or surfaces into any drains.

Rinsing fats, oils, and grease down any drains leads to clogged sewer pipes for everyone.
